Data Identification

<i>Abstract</i>	Der Datensatz der Strassenverkehrsunfallorte beschreibt die anonymisierten, lokalisierten Einzeldaten von Strassenverkehrsunfällen. Verfügbar sind Angaben zur Art und Schwere des Unfalls, dem Unfallzeitpunkt und dem Ort und der Strassenart des Unfalls. Die Strassenverkehrsunfallorte sind ab dem Statistik Jahr 2011 schweizweit im vorliegenden Modell verfügbar. Die Daten eines Kalenderjahres sind jeweils im Frühjahr des darauffolgenden Jahres verfügbar. Digitale Einzeldaten in unterschiedlichen Ausprägungen liegen jedoch seit 1992 vor.
